International Inspection & Certification Body

Who We Are ?

Femko International Technical Control Training and Certification Co. started its journey in 2014, aiming to give professional and innovative services in fields of inspection, surveillance, test, certification.

With its team consisting of engineers and staff experienced in their field, Femko is open to continuous improvement and growth. Femko continues to expand the scope of accreditation in related fields day by day.

Our Accreditations

EN ISO/IEC 17065

EN ISO/IEC 17020

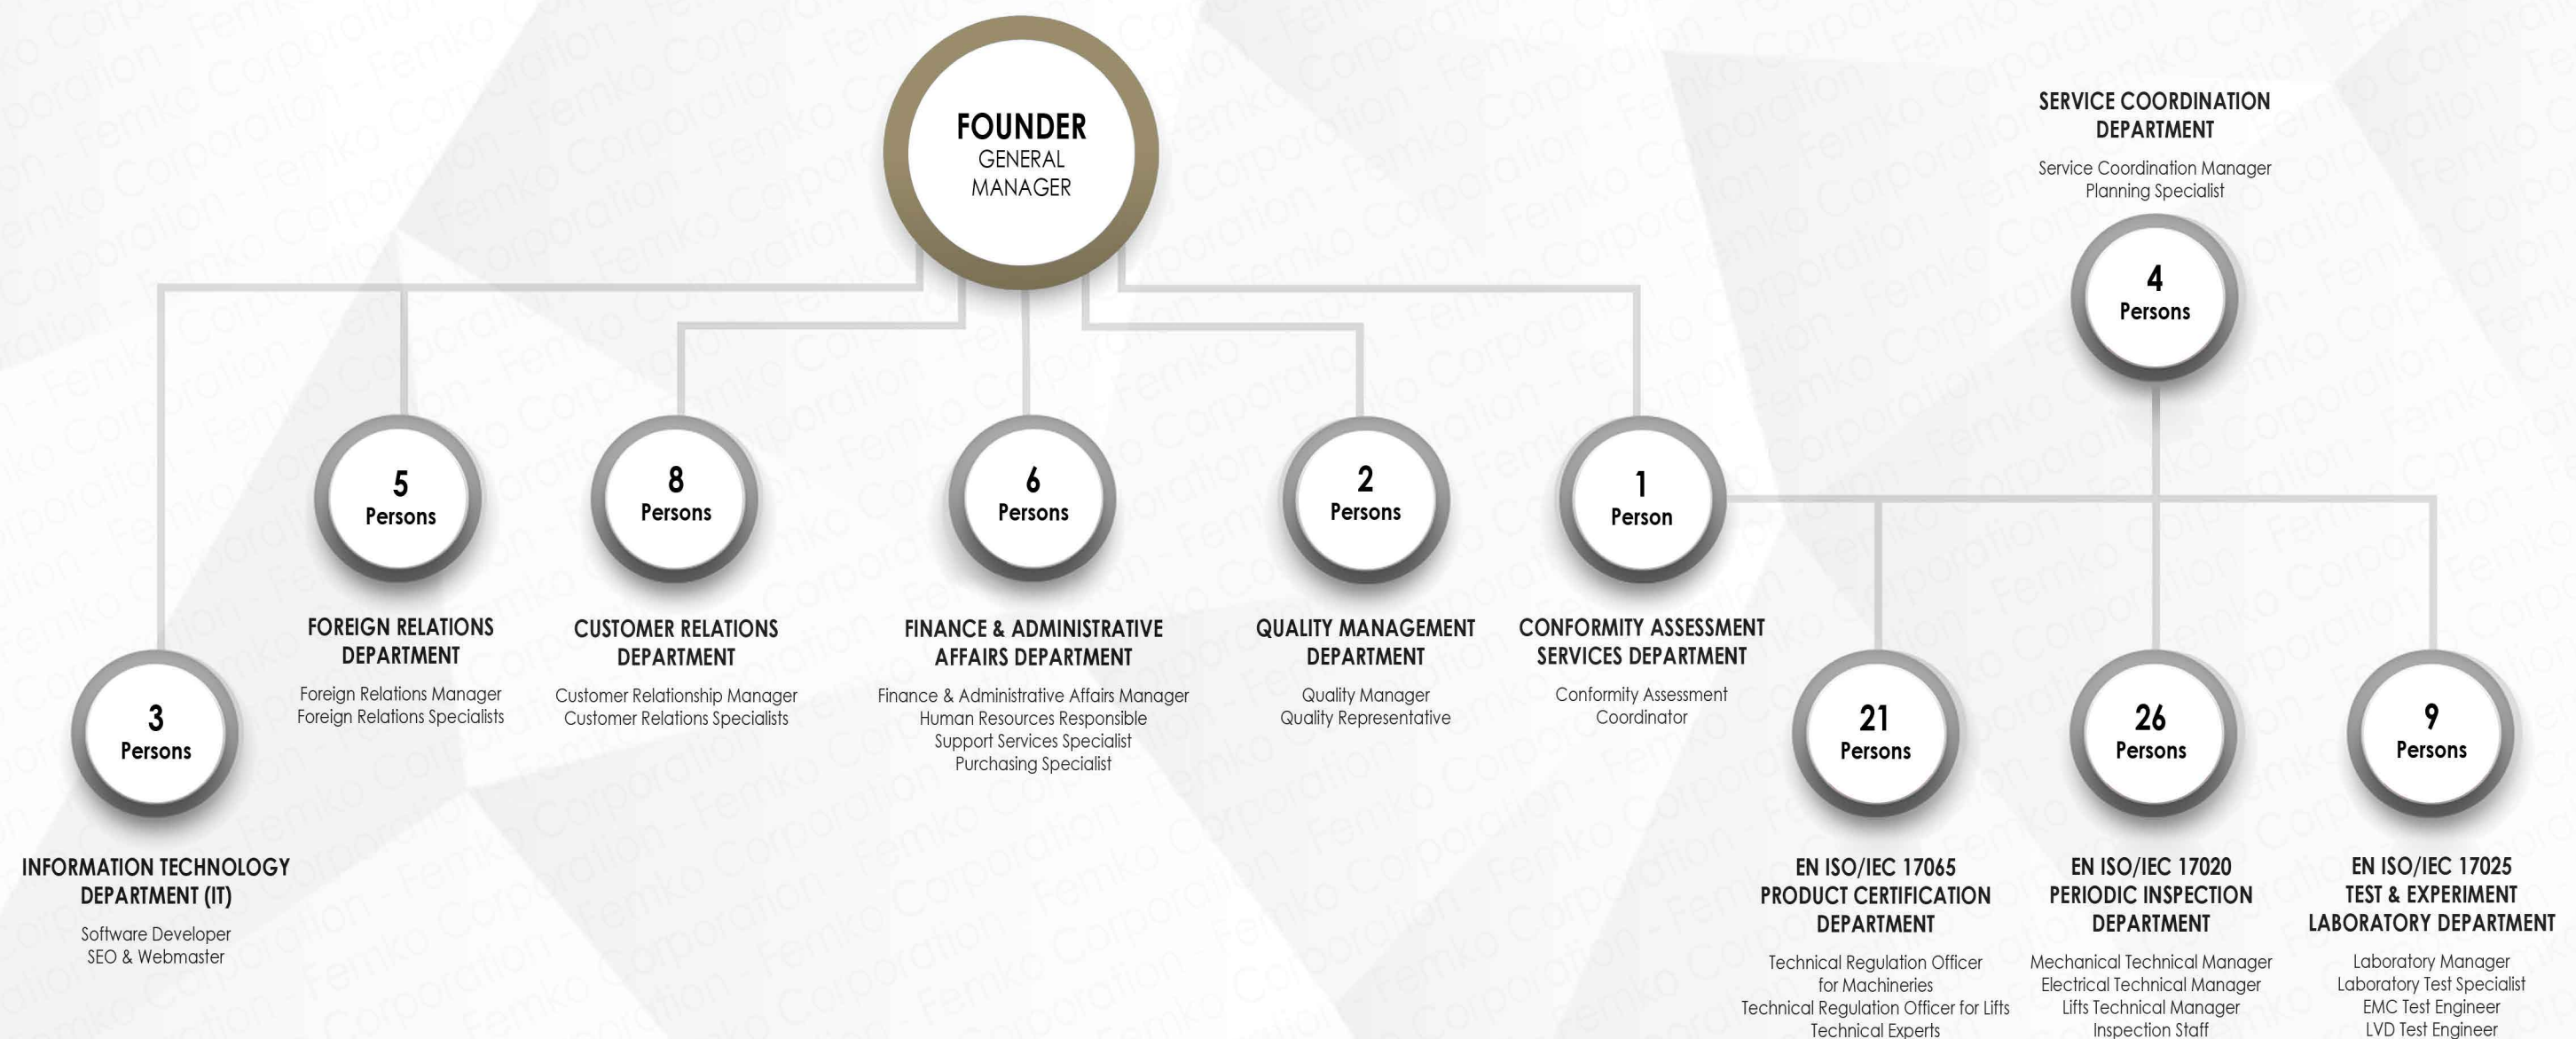

Within the scope of Femko's activities; It is an organization accredited by the Turkak Accreditation Agency, which has been signed with the European Accreditation Association (EA), the International Laboratory Accreditation Association (ILAC), the International Accreditation Forum (IAF) and has International Recognition with "Multilateral Recognition Agreements (MLA ve MRA)"

Femko's accreditation scopes; Product Certification and Periodic Inspection services. In addition, it continues its infrastructure and authorization studies in accordance with the requirements of EN ISO / IEC 17021 "System Certification Accreditation" and EN ISO / IEC 17025 "Accreditation of Experiment Laboratories".

Organizational Structure

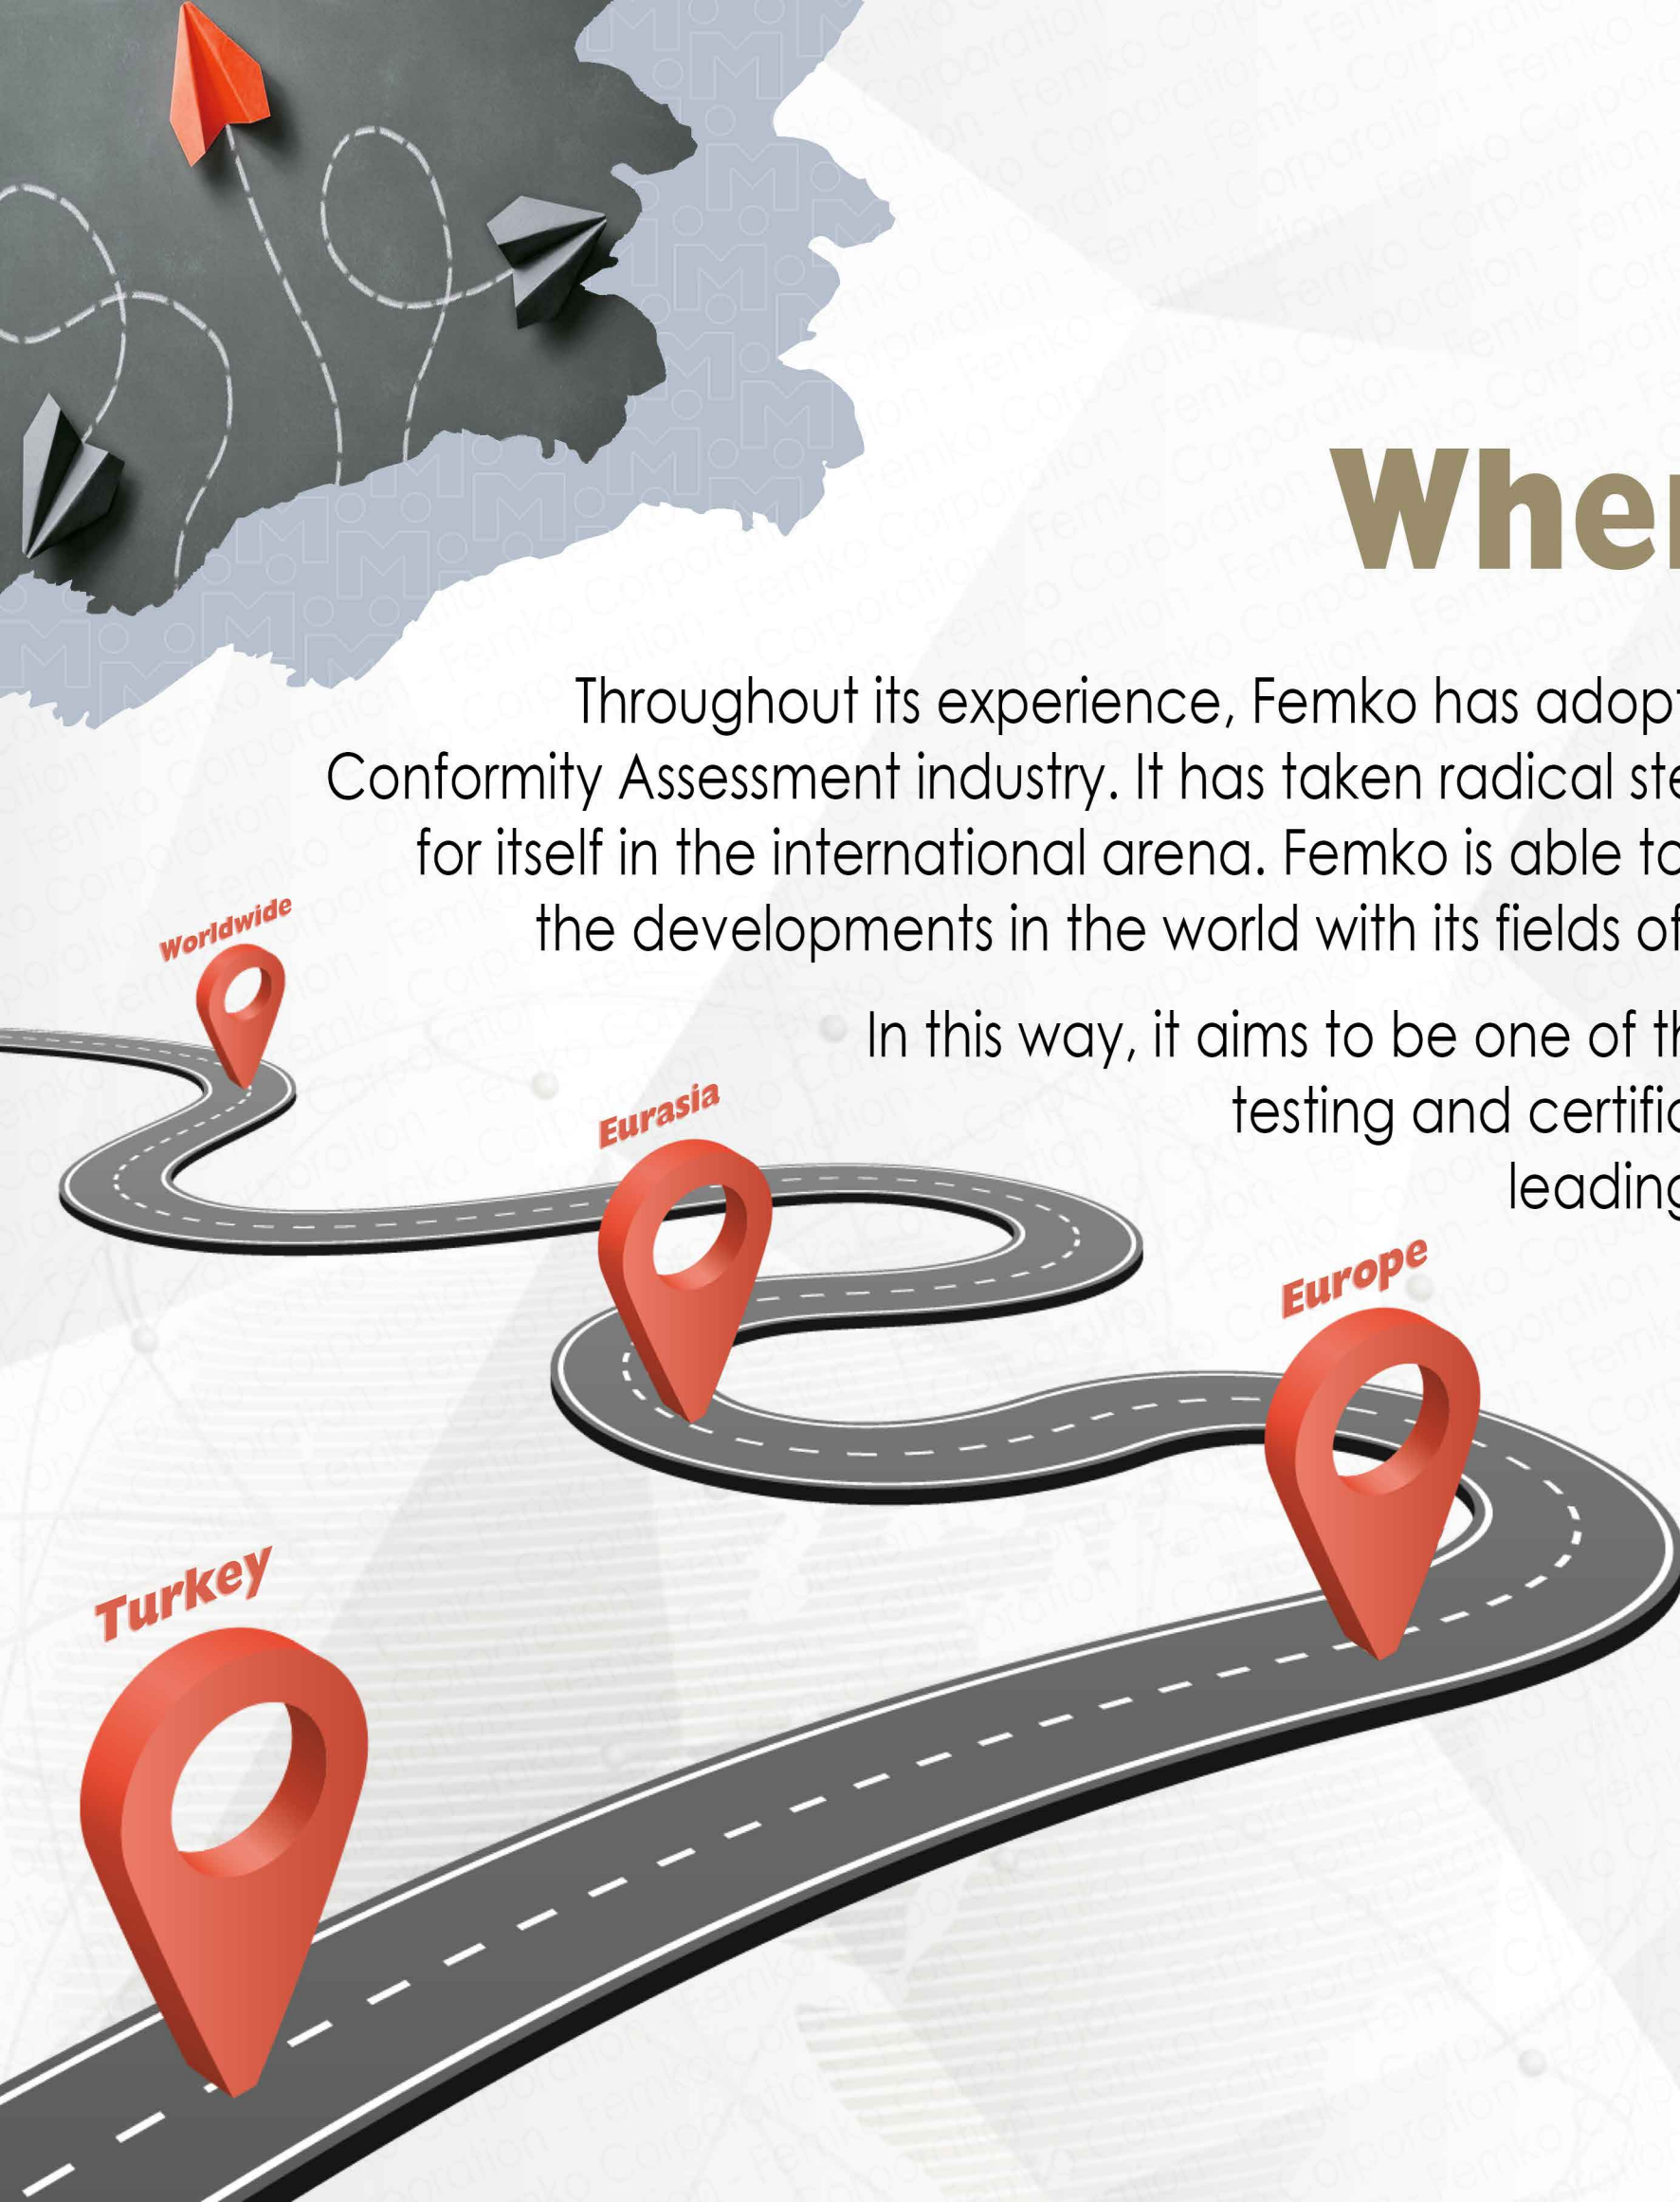

Femko Corporation, provides a professional workflow with its sectoral experience and operational structure consisting of experts within the scope of all the scope of activities it offers.

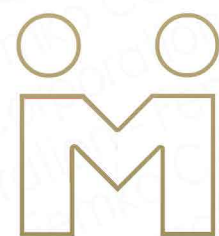

Where Are We Going?

Throughout its experience, Femko has adopted the principle of bringing a new perspective to the Conformity Assessment industry. It has taken radical steps in branding in a short time and has made a name for itself in the international arena. Femko is able to provide quality, reliable and fast service by following the developments in the world with its fields of activity and having the most up-to-date information.

In this way, it aims to be one of the most preferred international inspection, supervision testing and certification institutions. In this respect, it is in a followed and leading position in its sector. It is on its way to be a company that is open to continuous growth and development.

International Inspection & Certification Body

Our Services

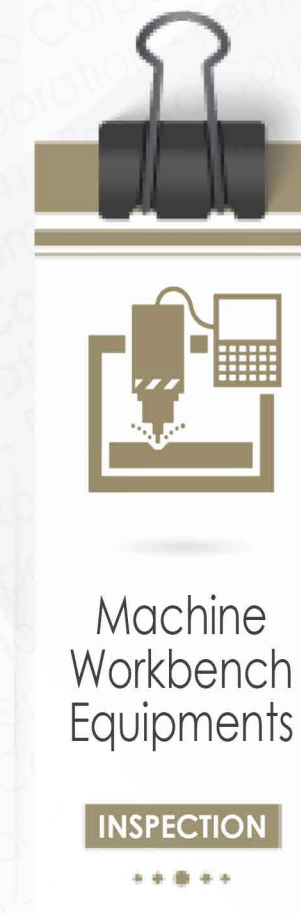

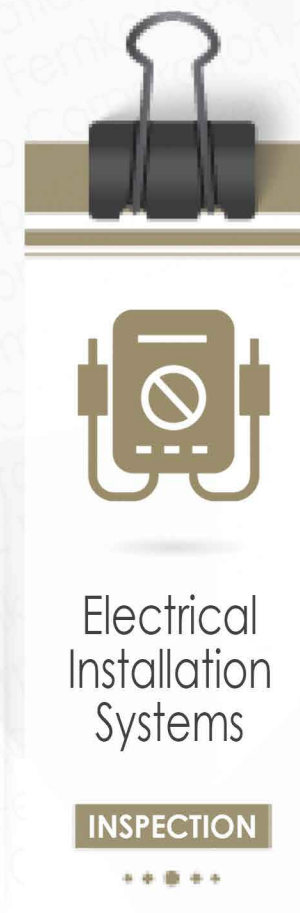

In accordance with national and international legal regulations Femko; Provides professional services in areas such as Certification, Periodic Control, Inspection, Testing and Training. Also uses the most appropriate tools and techniques for companies to institutionalize or fulfill their legal obligations.

With a customer-oriented service approach, it applies its service methods in line with the needs and scope of the customers it works with.

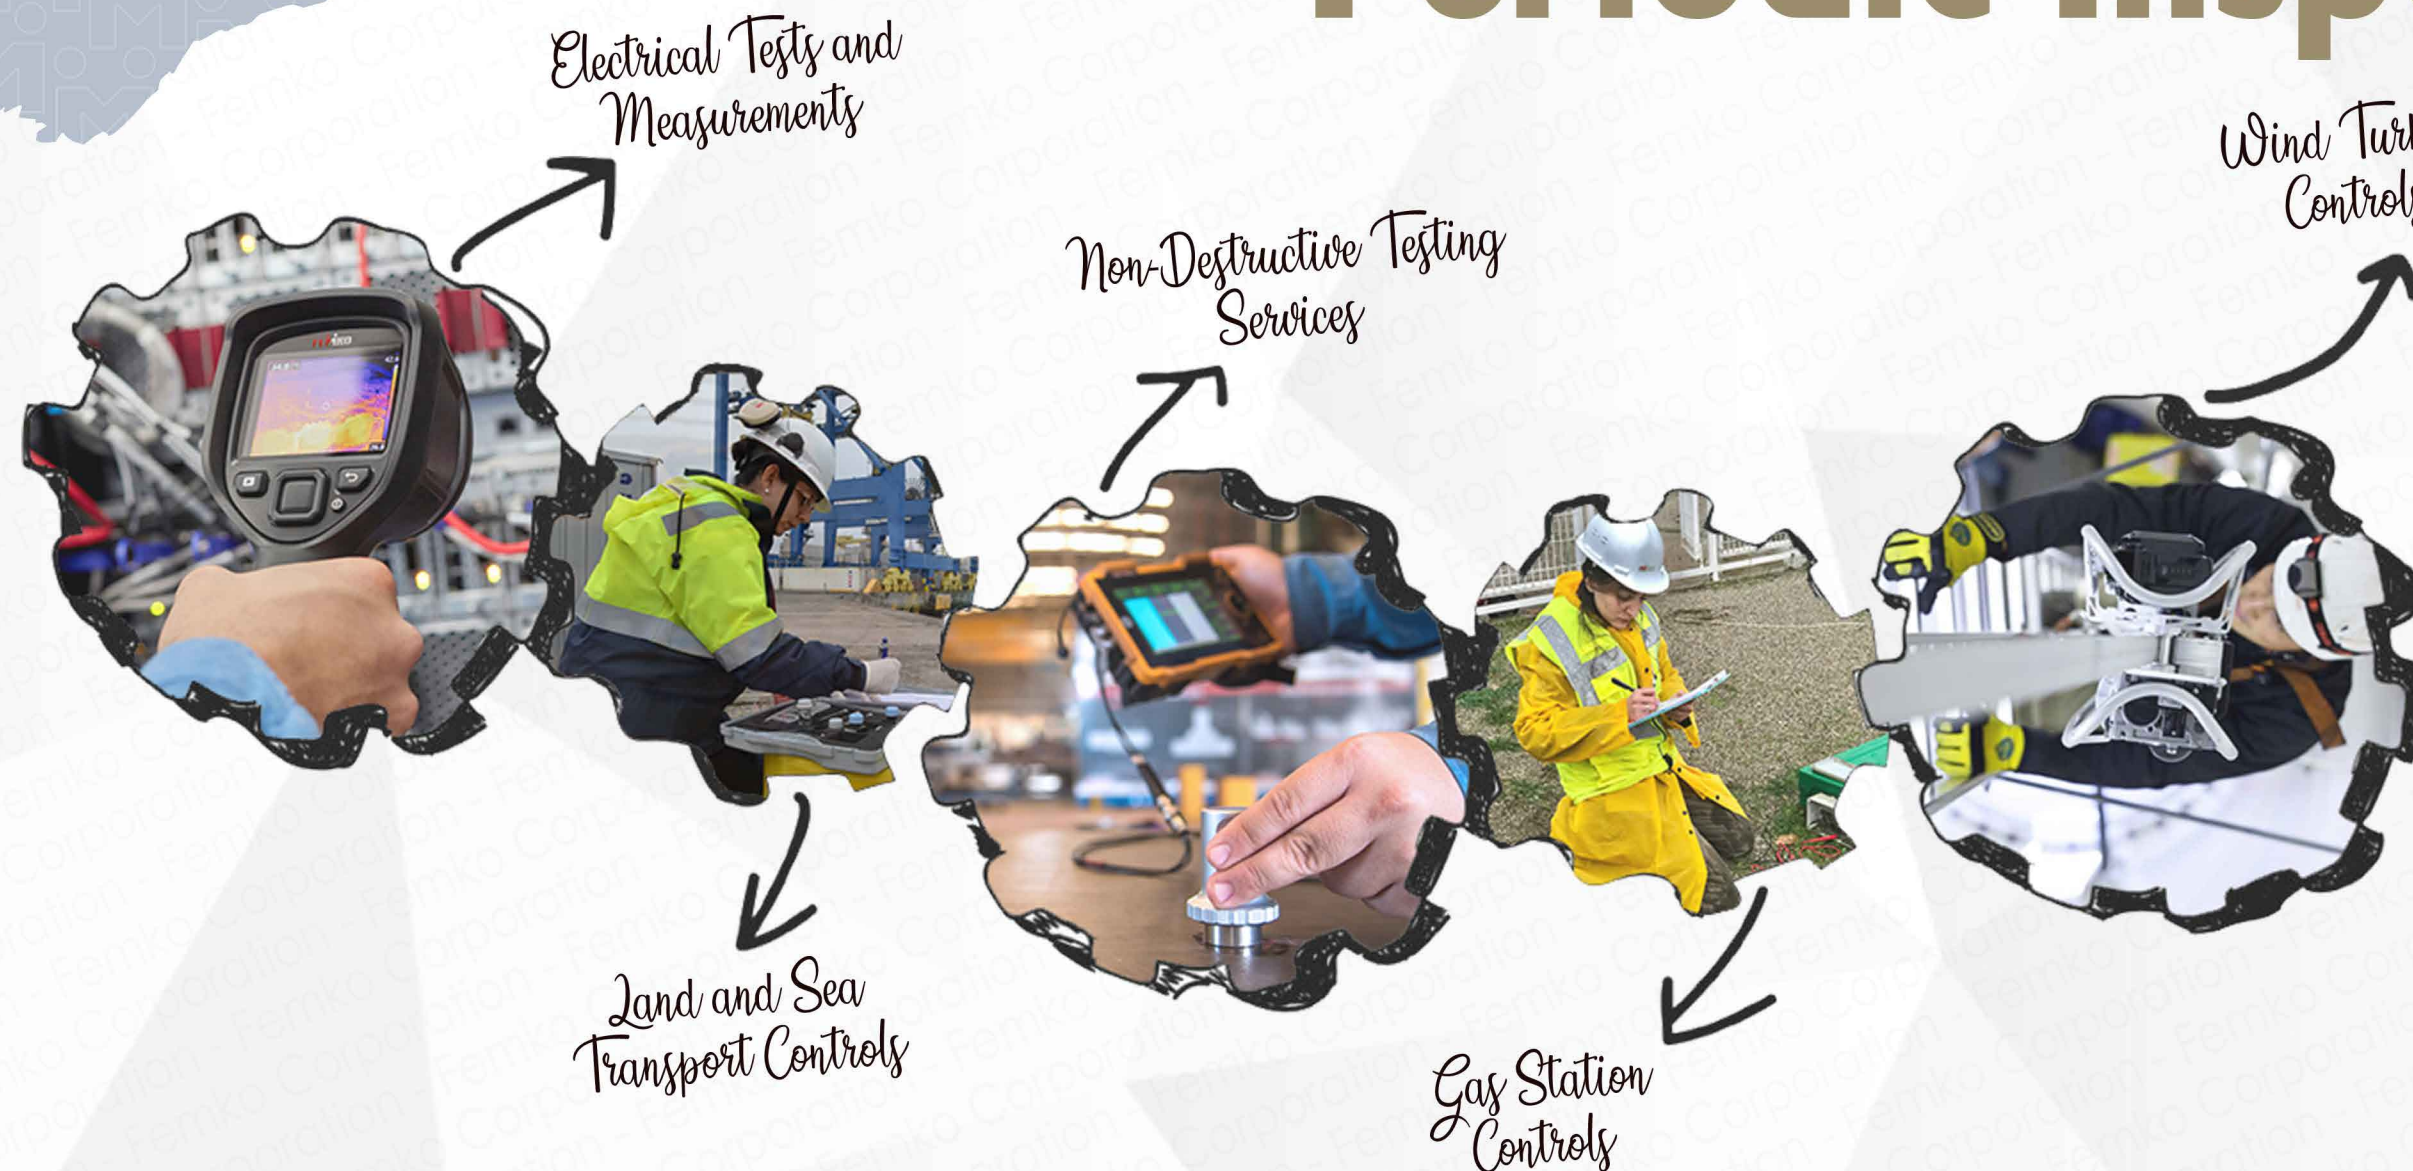

Periodic Inspection

According to law and directives , periodic inspection control of “Pressure Equipments”, “Lifting and Transmission Equipments”, “Fire and Ventilation Installations” and “Electrical Devices” in use is obligatory to provide occupational health and safety. According to “6331 Safety and Health of Workers at Work” directive, periodic inspection should be done by inspectors.

Periodic Inspection

Femko, for periodic controls of work equipment, within the ranges and criteria specified in the relevant national and international standards, with the manufacturer's data, it offers professional solutions by taking into account the requirements of science and technique. It checks and verifies the reliability of the relevant equipment for the periodic control processes that must be done at least once a year with the latest technological devices, experienced engineers and sector experience.

Audit & Certification

Products produced in the world have to fulfill a number of criteria in accordance with the international agreements made by the countries they are in or the special conditions of the countries they are exported to. In order for the producers to put their products on the market, it may be necessary to declare that they fulfill the criteria specified in the relevant legislation and standards, and these studies must be audited and certified by international audit organizations. Femko, as a Notified Body authorized by the European Union, provides inspection, testing and certification services for many products.

Audit & Certification

Femko, with its expert engineer staff and technological infrastructure, It offers a professional workflow for all your processes such as remote online audits, on-site field inspections, product security tests, design review and technical file evaluation.

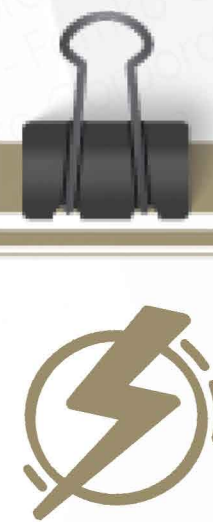

Test Laboratory

In order for a product to be placed on the market as required by the legal obligation, the safety tests of that product should be made absolutely and it should be checked whether the test values meet the requirements specified in the relevant standards. In this context, Femko; It offers professional services for tests such as "Immunity Emission Tests by Transmission and Radiation, Leakage Current, Insulation Resistance, High Voltage, Electrical Strength, Protection Against Surface Leakage, Input Power & Current, Shrinkage, Discharge, Humidity Resistance, Heating, Protection Against Access to Tense Sections, Voltage Drop, Glow Wire test, Unusual Work Test, Functional Tests"

Test Laboratory

Femko provides testing and measurement services in accordance with the standards in many areas, especially the Low Voltage Regulation (LVD) and the Electromagnetic Compatibility Regulation (EMC).

International Inspection & Certification Body

Traceability

When the concept of traceability is considered in terms of management systems in general; It refers to the retrospective traceability of a service, as well as the current accessibility of the service at the moment and the predictability of the service for the future.

In the inspection activities offered by Femko with its new generation technological infrastructure; A traceable mechanism is implemented, where documents, reports and objective findings can be evaluated online and future applications can be compared with the previous ones, reducing the workload of customers.

Traceable Audits

Due to their legal obligations, many businesses need a certain time and workforce every year for certification, audit and reporting activities. In addition, situations such as following expired certificate and audit reports, dozens of file analysis and archiving drudgery, follow-up of updates in standards and regulations can create a handicap for the targeted efficiency.

Femko offers a new generation traceable control mechanism with its technological infrastructure so that the audit can be carried out effectively and the service it provides to its customers can be carried out efficiently.
